SUMMARY

Founder of Kritix AI, focused on building production-ready AI products and enterprise SaaS platforms. Experienced in designing scalable backend architectures, AI-powered applications, voice intelligence systems, and full-stack web applications from scratch.

Strong background in building complete software systems—from UI/UX and backend architecture to AI integration, infrastructure, deployment, security, and automation. Passionate about open-source AI, voice intelligence, multimodal systems, and creating products that solve real-world business problems.

Currently leading the development of enterprise AI solutions, WhatsApp CRM infrastructure, and the KVIE (Kritix Voice Intelligence Engine) project while researching future AI assistants capable of human-like conversations.

EDUCATION

National Institute of Electronics and Information Technology

O Level Diploma (NIELIT)

Completed

University of Rajasthan, India

Bachelor of Science (B.Sc.) in Mathematics, Interested in pursuing an MBA in the future with a focus on technology, entrepreneurship, and business strategy.

Pursuing

EXPERIENCE

Founder & AI Engineer

2025 – Present

Kritix AI

- Founded Kritix AI to develop AI-powered enterprise software and intelligent automation products.
- Designed scalable backend architectures capable of supporting thousands of concurrent users.
- Leading development of AI products including Voice AI, CRM systems, automation tools, and AI assistants.
- Building enterprise-grade SaaS infrastructure with security-first architecture.
- Managing product architecture, hiring, roadmap planning, branding, and technical leadership.
- Developing reusable AI infrastructure for future products.
- Product Architecture
- Backend Engineering
- AI Integration
- Infrastructure Planning
- Security Design
- Team Leadership
- Product Strategy
- Research & Development

PROJECTS

KVIE (Kritix Voice Intelligence Engine) | An advanced voice intelligence platform designed to create human-like conversations using modern AI models.

- Speech-to-Text
- Text-to-Speech
- Emotion Detection
- Context Memory
- Voice Cloning Research

- Streaming Conversations
- Human-like Responses
- Low Latency Architecture
- Future Multi-language Support
- Whisper
- Open-source LLMs
- Python
- FastAPI
- WebSockets
- Streaming APIs

Enterprise WhatsApp CRM Platform | Designed and built an enterprise SaaS platform allowing businesses to manage multiple WhatsApp devices from one dashboard.

- Multi-device Management
- Shared Inbox
- Bulk Messaging
- Campaign Management
- Scheduling
- CRM
- Labels
- Templates
- Analytics
- Team Collaboration
- Customer Segmentation
- Automation
- Polls
- Broadcast Management
- Multi-tenant SaaS
- Secure Authentication
- REST APIs
- Real-time Updates
- Queue-based Messaging
- Scalable Backend

AI Enterprise Platform | Building an ecosystem of AI-powered business products including:

- AI Assistants
- Voice Intelligence
- Workflow Automation
- Business Analytics
- AI APIs
- Enterprise AI Tools

TECHNICAL SKILLS

SOFTWARE ARCHITECTURE

Experienced in designing: - Enterprise SaaS Architecture - Microservice-ready Systems - RESTful APIs - Authentication Systems - Event-driven Architecture - Real-time Systems - Multi-tenant Platforms - Scalable Backend Infrastructure - AI-powered Applications

AREAS OF INTEREST

- Artificial Intelligence - Voice Intelligence - Multimodal AI - AI Infrastructure - Enterprise SaaS - System Design - Distributed Systems - AI Research - Human Computer Interaction - Intelligent Automation

LEADERSHIP

- Founded and leading Kritix AI. - Hiring and mentoring developers. - Planning long-term AI product strategy. - Driving technical architecture decisions. - Building enterprise-grade software products from concept to deployment.

ACHIEVEMENTS

- Founded an AI startup focused on enterprise solutions. - Built production-ready SaaS architecture from scratch. - Developed the KVIE Voice Intelligence initiative. - Designed enterprise WhatsApp CRM architecture. - Experienced in building complete full-stack applications independently. - Strong focus on scalable AI product development and modern software engineering.

LANGUAGES

- English (Professional Working Proficiency) - Hindi (Native)

CAREER OBJECTIVE

To build world-class AI products that compete globally by combining cutting-edge artificial intelligence, scalable software engineering, and exceptional user experience. My long-term vision is to create a unified global AI ecosystem through Kritix AI—an interconnected intelligent system powered from a single secure core that ensures safety, governance, and continuous improvement. This ecosystem will deliver advanced technology to every corner of the world, enabling innovation, research, and development beyond current boundaries, and driving a global technological revolution through voice intelligence, enterprise automation, and next-generation AI systems.
